

Mansi

STUDYING

Aerospace Engineering MSc

YEAR

Finishing Fourth year of a Masters Degree. Between my second and third year of uni I went on an exchange programme to study in Australia for a year.

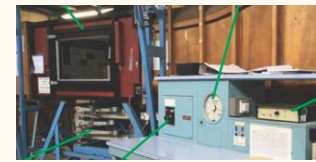

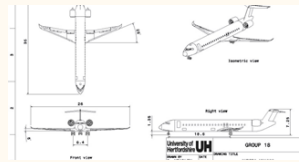

FUTURE CAREER FOCUS

Space Industry

Q&A

Favourite thing about your course?

I loved my third year project - it gave me the opportunity to research more about engineering in space and how space junk can impact space exploration. I really enjoyed this as it allowed me to learn about something I am super interested in! I also like taking part in practicals such as using the wind tunnel and recording data!

Favourite thing about university?

My favourite thing about university has been meeting lots of new people! I met people from all sorts of backgrounds - from students, to lecturers and people in industry. I have learnt so much in many aspects and it has been a fantastic journey.

Would you recommend going to university?

If you would like to do a degree then I would definitely recommend going to university. The university experience develops many skills, not only in the subject you are studying, and is a good stepping stone moving into the working world. Think about what sort of career you may like to go into and then decide whether a degree will help you to get there!

EXTRA CURRICULAR

- Worked part time whilst studying
- Joined different societies and committees
- Joined my university badminton team
- Volunteering
- Attend events and conferences

What would be your biggest bit of advice to a student applying to university?

Make sure you enjoy the subject you want to study - you will be spending the next few years studying about it! Also, do think about things like if you would like to move away from home or how far you want to go!
